

DIGVIJAY THORAT

Cloud & DevOps Engineer

[GitHub](#) | [LinkedIn](#) | [Portfolio](#) | +91 9112806323

SUMMARY

DevOps Engineer with hands-on experience designing and deploying containerized, cloud-native applications on AWS using Docker, Kubernetes, and Terraform. Skilled in provisioning core AWS infrastructure (VPC, EC2, IAM, ECR, ALB, RDS), building GitHub Actions CI/CD pipelines, automating infrastructure with IaC, and setting up Prometheus/Grafana monitoring for application workloads.

TECHNICAL SKILLS

- Cloud Platforms: AWS (EC2, VPC, IAM, S3, RDS, ALB, CloudFront, Route53, Lambda, CloudWatch, ECR, ECS, EKS, EBS, DynamoDB, AWS CLI)
- Containers & Orchestration: Docker, Docker Compose, Kubernetes, Helm
- Infrastructure as Code: Terraform, AWS CloudFormation
- CI/CD & Automation: GitHub Actions, Docker Hub
- Monitoring & Observability: Prometheus, Grafana
- Operating Systems & Scripting: Linux, Bash
- Version Control: Git, GitHub

PROJECTS

Student Feedback System — DevOps Project

Docker, Kubernetes, AWS (VPC, EC2, IAM, ECR, ALB, RDS), GitHub Actions, NGINX Ingress, Helm, Prometheus, Grafana

- Provisioned a custom AWS VPC with public and private subnets across multiple AZs, and deployed a Kubernetes cluster on EC2 to host the full-stack application
- Configured Deployments, Services, ConfigMaps, Secrets, and PV/PVCs, and secured EC2 nodes with least-privilege IAM roles for ECR image pulls
- Built a GitHub Actions CI/CD pipeline to build Docker images, push to Amazon ECR, and automate deployment to the cluster
- Set up an Application Load Balancer (ALB) in front of NGINX Ingress for external traffic routing, and migrated MongoDB storage to a managed RDS-based datastore in a private subnet
- Integrated Prometheus and Grafana for cluster and application monitoring

Modern Todo App

Docker, Kubernetes, Helm, GitHub Actions, PostgreSQL, AWS (VPC, EC2, IAM, ECR, ALB, RDS)

- Deployed a full-stack app on a Kubernetes cluster hosted on EC2 within a custom VPC, using PV/PVCs for durable storage and Helm charts for modular, repeatable deployment management
- Migrated the PostgreSQL database to Amazon RDS in a private subnet for managed, durable, and scalable storage, secured via security groups scoped to the EC2 nodes
- Configured an Application Load Balancer (ALB) for traffic routing, and IAM roles for secure, least-privilege access to ECR
- Automated builds and deployments via a GitHub Actions CI/CD pipeline, pushing images to Amazon ECR and Docker Hub

github.com/digvijay0804/Modern_Todo_App

Digvijay Portfolio Website

Docker, GitHub Actions, AWS (EC2, S3, IAM, AMI, CloudFront, Route53, SSL)

- Containerized the portfolio website with Docker and Docker Compose for consistent local and production environments
- Built a GitHub Actions CI/CD workflow to automate image build and deployment on every push
- Deployed on an AWS EC2 instance provisioned from a custom AMI, with S3 for static assets and CloudFront as a CDN for low-latency global delivery
- Set up Route53 for domain routing and enabled SSL for secure HTTPS access, with IAM roles/policies for access control

EDUCATION

Master of Computer Science (MCS) — Bharati Vidyapeeth (Deemed to be University), Pune

2025 – Present

Bachelor of Computer Science (BCS) — Shivaji University, Kolhapur

2022 – 2025 | Percentage: 70.00%

CERTIFICATIONS

- AWS Solutions Architecture Job Simulation (2026)
- TWS DevOps Bootcamp (2025)
- DevOps and Cloud Engineering – SkillEcted, JSSAV Edu Pvt Ltd (2026)
